

Tension Check Camera

The tension check camera feature available in Autopilot, Navigator and Pantovision all require the installation of a USB device to activate. The software has the necessary drivers already installed and once the USB device is recognized the software will automatically configure to the device. Please make sure to use one of the cameras listed below that ABM has tested. Other cameras may work as well but we cannot guarantee that the system will recognize them. The camera can be mounted to the front of the machine near the bobbin area by use of industrial strength Velcro. The Tension check is a very nice DIY addition to any Innova computer system. Please follow the instructions closely.

Tension Check Camera info:

For tension check the customer needs a 2 megapixel or higher Auto Focus USB webcam.

We have tested:

Radio Shack GigaWare 2.0 Megapixel Webcam with Auto-Focus approx. \$10 on sale from \$39.00

Best Buy Logitech c615 8 Megapixel HD Webcam with Auto-Focus approx. \$59.99 on sale from \$69.99

Mount on lower beam near needle plate using industrial strength peel and stick velcro.

USB needs to run up to tablet which may need a splitter if there is only one USB port available.
